Faizan

AI Product Builder | Independent Software Developer | Android & Full-Stack

ahmedfaizan931start@gmail.com | github.com/ahmedfaizan931star-dev | fiverr.com/s/qbbxeDg

SUMMARY

Independent developer with around two years of hands-on software work across AI-enabled products, native Android applications and full-stack web platforms. Builds end-to-end workflows—from architecture and data handling to CI/CD, testing and release preparation. Has designed and operated much of the development workflow from an Android phone.

PRODUCT ENGINEERING

ArtifactLoop — Founder & Product Engineer | **Active development**

Building an AI software-production workspace designed to connect request intake, planning, execution, testing, verification, repair and deployment. Product foundations include PostgreSQL-backed job queues with lease/heartbeat handling, dependency-aware task execution, a problems engine and browser-agent workflows. Deeper evidence-led verification and repair capabilities remain under active development.

Stack: Next.js 16, React 19, TypeScript, Supabase, PostgreSQL, AI APIs, Vercel

Agentic Bot — Early-stage concept for a web-first assistant combining research, connected tools and browser-based workflows.

INDEPENDENT AND FREELANCE DEVELOPMENT

Android & Full-Stack Developer | **Freelance / self-directed products · Ongoing**

- ScanMate AI Pro: Built a document workflow with CameraX capture, ML Kit OCR, auto-deskew, full-text search, AES-128-protected PDF export, biometric vault and Gemini-powered document tools; completed 15 iterative hardening rounds.
- VaultClean AI: Built an AI-assisted storage utility; audited 49 Kotlin files, improved asynchronous work across ViewModels and integrated billing and AdMob components.
- PowerMate AI: Built battery and charging diagnostics with on-device readings; resolved GitHub Actions / Gradle pipeline issues and completed a UI/UX overhaul.
- SpendWise: Built an expense and subscription tracker with receipt OCR, Gemini-assisted categorization and Room-based local storage.
- Web engineering: Built the GlobalGlide travel experience in React and TypeScript; audited and restructured a React/TypeScript/Vite business-directory application for modular deployment.
- Signal: Prototyped a compact Gemini-powered chat interface with Markdown rendering and sanitized HTML output.
- Delivery: Set up GitHub Actions workflows producing Android debug and release builds without a local desktop build toolchain.

DEVELOPER CONTENT

Developer Content Creator — Produces beginner-friendly Android development content, with short-form video production and editing completed on-device.

CORE SKILLS

Android	Kotlin, Jetpack Compose, Hilt, Room, Coroutines/Flow, CameraX, ML Kit, Play Billing
Web & backend	React, TypeScript, Next.js, Node.js, Python, Supabase, PostgreSQL
AI & delivery	Gemini API integration, AI workflow design, GitHub Actions CI/CD, Google Play release workflows
